21. V2-5 Menus/nav/drawables/assets
22. V2-6 Manifest specifics
23. V2-7 Persistence & preferences
24. V2-8 UI rebuild blueprint
25. V2-9 Resource archive

0 Executive summary

Overall risk: CRITICAL. The production network configuration trusts user-installed CAs, bundles a **Charles Proxy CA**, permits cleartext, and enforces no certificate pinning. Together this makes full traffic interception (including `Authorization: Bearer` tokens) trivial for an on-path attacker or a malicious profile.

Mrsool is a large on-demand delivery & services super-app: ordering, courier mode, chat (XMPP), payments (Paymob / OPPWA 3-D Secure), subscriptions ("Mrsool Black"), groceries, stickers, and an AI concierge ("Butler"). It is built with Kotlin + Jetpack Compose, 8 DEX files, ~41.5k classes, and ships native libraries for device fingerprinting and credential crypto.

Key findings

- **Critical — MITM-ready TLS profile:** `base-config` trusts `user` CAs and permits cleartext for every domain; manifest sets `usesCleartextTraffic=true`; no pinning.
- **Critical — Charles Proxy CA** (`mrsool_ca.pem`) bundled and trusted in production.
- **High — device-fingerprint & anti-tamper stack** (Bureau) with recoverable obfuscated keys.
- **Medium — broad exported surface** + `mrsool://` / App-Links deep links.
- **Medium — expired own root CA** (`mrsool_root_ca.pem`, expired 2025-07-12).

1 App identity & build

Field	Value
Package name	`com.mrsool`
Version name / code	4.3.0 / 771416981
minSdk / targetSdk	21 / 35
Classes / resources	41574 / 6810
DEX files	8
Native ABIs	arm64-v8a, armeabi-v7a, x86, x86_64
App class	`com.mrsool.utils.MrsoolApp`
APK SHA-256	`cf2ff2bf5a266f36e78843b9d1e68187cfea90e06abdd075cc8303dbe450522a`
APK size	60,677,246 bytes
Signing schemes	v1, v2
Signer subject	C=SA / ST=riyadh / L=riyadh / O=mrsool / OU=mrsool / CN=mrsool
Certificate SHA-256	`fca8ee6ed0ff95cd362cb2f4e6a9e5ad5fb0393a52354519aeaf3946aa2f42b3`
Validity	2017-01-03T13:18:07.000Z → 2041-12-28T13:18:07.000Z
Key algorithm / serial	rsa / 4A331C91
Application flags	allowBackup=false · **usesCleartextTraffic=true** · extractNativeLibs=true · networkSecurityConfig present

6.2 Authentication & headers

Header / field	Purpose
`Authorization: Bearer <token>`	Session API token
`Authorization: Basic …`	Legacy/basic auth (some flows)
`api_key` / `apiKey`	Public API key
`device_id` / `deviceId`	Device identity
`X-APOLLO-OPERATION-NAME`, `X-APOLLO-OPERATION-ID`, `X-APOLLO-CAN-BE-BATCHED`	Apollo GraphQL
`X-CleverTap-*`, `X-Goog-Api-Key`	Analytics / Google APIs
`User-Agent`, `Accept-Encoding`, `Content-Type`	Standard

6.3 Complete app Retrofit contract

`hp.a`

7 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
GET `api/v1/feedback/suggestions`	Query:rating (I)	—	Suggestions
GET `api/v1/bottomsheet/content`	Query:type (String)	—	Content
POST `api/v1/feedback/submit`	Body: (com.mrsool.butler.data.api.model.ButlerFeedbackSubmitRequest)	—	Submit
GET `api/v1/chat/poll`	Query:polling_key (String)	—	Poll
POST `api/v1/chat`	Body: (com.mrsool.butler.data.api.model.ButlerChatRequest)	—	Chat
POST `api/v1/chat/end-session`	Body: (com.mrsool.butler.data.api.model.ButlerEndSessionRequest)	—	End session
POST `api/v1/chat/init`	Body: (com.mrsool.butler.data.api.model.ButlerInitRequest)	—	Init

`tq.f`

4 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
GET `payins/payin_transactions/{id}/check_status`	Path:id (String)	—	Check status
PATCH `payins/payin_transactions/{id}/mark_processing`	Body: (et.f), Path:id (String)	—	Mark processing
POST `payins/payin_transactions`	Body: (et.b)	—	Payin transactions
GET `payins/payin_options`	Query:country (String), Query:language (String), Query:domain_code (String), Query:widget_version (String)	—	Payin options

`tq.e`

3 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `orders/{order_id}/update_order_state`	Path:order_id (String), Body: (Object)	—	Update order state
PUT	Url: (String), Body: (x30.c0), HeaderMap: (Map)	—	dynamic URL
POST	Url: (String), Body: (com.mrsool.data.repo.models.searchv3.SearchRequestBody)	—	dynamic URL

`tq.a`

6 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
GET `algolia_settings`	QueryMap: (Map)	—	Algolia settings
GET `menus/categories/with_algolia_settings`	QueryMap: (Map)	—	With algolia settings
POST `business_orders/validate`	Body: (x30.c0), QueryMap: (Map)	—	Validate
POST `business_orders/refactored_new`	QueryMap: (Map)	—	Refactored new
GET `business_orders/{businessOrderId}`	Path:businessOrderId (Integer), QueryMap: (Map)	—	{businessorderid}
POST `business_orders/submit`	QueryMap: (Map)	—	Submit

`tq.g`

6 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `location/last`	Body: (com.mrsool.bean.CourierLastLocationParamBean)	—	Last
POST `get_last_location`	Body: (com.mrsool.bean.CourierLastLocationParamBean)	—	Get last location
POST `location/history`	Body: (com.mrsool.bean.TrackingHistoryParamBean)	—	History
POST `all_histories`	Body: (com.mrsool.bean.TrackingHistoryParamBean)	—	All histories
POST `location/store`	Body: (com.mrsool.bean.LocationData)	—	Store
POST `coordinates`	Body: (com.mrsool.bean.LocationData)	—	Coordinates

`tq.d`

95 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
GET `user_payments/payment_options`		—	Payment options
POST `users/{user_id}/coupon_list`	Path:user_id (String), QueryMap: (Map)	—	Coupon list
GET `orders/{order_id}/courier_assignments`	Path:order_id (String)	—	Courier assignments
POST `users/{user_id}/card_list`	Path:user_id (String)	—	Card list
PATCH `users/{user_id}`	Path:user_id (String), QueryMap: (Map)	—	{user id}
POST `shops/get_deeplink`	QueryMap: (Map)	—	Get deeplink
POST `users/{user_id}/get_courier_weblink_token`	Path:user_id (String), QueryMap: (Map)	—	Get courier weblink token
PATCH `users/{user_id}`	Path:user_id (String), PartMap: (HashMap), Part: (x30.y$c)	—	{user id}
POST `shops/get_manual`	QueryMap: (Map)	—	Get manual
POST `chatbot_orders`	PartMap: (HashMap), Part: (List)	—	Chatbot orders
GET `users/{user_id}/notifications`	Path:user_id (String), QueryMap: (Map)	—	Notifications
PUT `users/{user_id}/courier_notification_preferences`	Path:user_id (String), Body: (x30.c0)	—	Courier notification preferences
GET `cancel_reasons`	QueryMap: (Map)	—	Cancel reasons
POST `orders/{order_id}/issue_bill`	Path:order_id (String), PartMap: (HashMap), Part: (x30.y$c)	—	Issue bill
POST `orders/{order_id}/mark_inappropriate`	Path:order_id (String), QueryMap: (Map)	—	Mark inappropriate
POST `shops/get_nearby_branches`	QueryMap: (Map)	—	Get nearby branches
GET `static_labels`	QueryMap: (Map)	—	Static labels
POST `orders/{order_id}/verify_3d_secure_pin`	Path:order_id (String), QueryMap: (Map)	—	Verify 3d secure pin
POST `orders/{order_id}/accept_reject_offer`	Path:order_id (String), FieldMap: (HashMap)	—	Accept reject offer
GET `users/{user_id}/courier_notifications_v2`	Path:user_id (String), QueryMap: (Map)	—	Courier notifications v2
PATCH `orders/{order_id}/withdraw_offer`	Path:order_id (String), QueryMap: (Map)	—	Withdraw offer
POST `inapt_order_reasons`	QueryMap: (Map)	—	Inapt order reasons
POST `orders/{order_id}/cancel_check`	Path:order_id (String), Body: (com.mrsool.order.buyer.confirmcancellation.models.CheckCancelRequest)	—	Cancel check
PATCH `orders/{order_id}`	Path:order_id (String), QueryMap: (Map)	—	{order id}
POST `users/{user_id}/replace_coupon`	Path:user_id (String), QueryMap: (Map)	—	Replace coupon
POST `announcements/{id}/details`	Path:id (String), QueryMap: (Map)	—	Details
POST `shops/manual_read`	QueryMap: (Map)	—	Manual read
DELETE `shops/rating_reviews/{id}`	Path:id (String)	—	{id}
POST `orders/{order_id}/get_min_max_offer`	Path:order_id (String), QueryMap: (Map)	—	Get min max offer
POST `orders/{order_id}/read_message`	Path:order_id (String), FieldMap: (HashMap)	—	Read message
POST `orders/{order_id}/save_message`	Path:order_id (String), PartMap: (HashMap), Part: (x30.y$c)	—	Save message
POST `shops`	FieldMap: (HashMap)	—	Shops
POST `orders/{order_id}/issue_offer`	Path:order_id (String), FieldMap: (HashMap)	—	Issue offer
GET `orders/{order_id}/payment_receipt`	Path:order_id (String)	—	Payment receipt
POST `users/{user_id}/delete_location_bookmark`	Path:user_id (String), QueryMap: (Map)	—	Delete location bookmark
GET `app_settings`	QueryMap: (Map)	—	App settings
GET `/discovery-service/api/v1/search-suggestions`	Query:query (String)	—	Search suggestions
POST `users/update_device_info`	FieldMap: (HashMap)	—	Update device info
PUT `user_payments/{id}`	Path:id (String), QueryMap: (Map)	—	{id}
GET `cashback_promotions`		—	Cashback promotions
POST `users/{user_id}/delete_notification`	Path:user_id (String), QueryMap: (Map)	—	Delete notification
GET `users/{user_id}/my_orders`	Path:user_id (String), QueryMap: (Map)	—	My orders
PATCH `users/{user_id}`	Path:user_id (String), FieldMap: (HashMap)	—	{user id}
POST `orders/{order_id}/send_menu_order_confirmation_to_courier`	Path:order_id (String)	—	Send menu order confirmation to courier
PUT `users/{user_id}/add_courier_sponser`	Path:user_id (String), QueryMap: (Map)	—	Add courier sponser
POST `orders/{order_id}/save_message`	Path:order_id (String), PartMap: (HashMap), Part: (List)	—	Save message
POST `orders/{order_id}/update_tracking_status`	Path:order_id (String), QueryMap: (Map)	—	Update tracking status
PATCH `users/{user_id}/read_notification`	Path:user_id (String), QueryMap: (Map)	—	Read notification
POST `user_payments`	QueryMap: (Map)	—	User payments
GET `users/{id}/service_rating_reviews`	Path:id (String), QueryMap: (Map)	—	Service rating reviews
POST `users/{user_id}/update_notification_status`	Path:user_id (String), QueryMap: (Map)	—	Update notification status
PATCH `users/{userid}/verify_code`	Path:userid (String), FieldMap: (HashMap)	—	Verify code

POST `bookme_orders`	Body: (dp.c)	—	Bookme orders
POST `announcements/{id}/update_view_count`	Path:id (String), QueryMap: (Map)	—	Update view count
PUT `user_preferences`	QueryMap: (Map)	—	User preferences
POST `call_options`	QueryMap: (Map)	—	Call options

6.4 SDK Retrofit interfaces (bundled)

`tq.c`

1 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `directions/v2:computeRoutes`	Header:X-Goog-FieldMask (String), Body: (com.mrsool.bean.googleservice.RoutesApiRequest)	—	V2:computeroutes

`tq.b`

1 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `reverse_geocode`	QueryMap: (Map)	—	Reverse geocode

`io.intercom.android.sdk.helpcenter.api.HelpCenterApi`

5 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `articles/{articleId}`	Path:articleId (String), Body: (Map)	—	{articleid}
POST `help_center/collections/{id}`	Path:id (String), Body: (Map)	—	{id}
POST `help_center/collections`	Body: (Map)	—	Collections
POST `articles/{articleId}/react`	Path:articleId (String), Query:reaction_index (I), Query:article_content_id (String), Query:allow_auto_responses (Z), Query:article_source (String), Body: (Map)	—	React
POST `help_center/search`	Query:phrase (String), Query:article_source (String), Body: (Map)	—	Search

`io.intercom.android.sdk.tickets.create.data.TicketApi`

4 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `tickets/create`	Body: (x30.c0)	—	Create
POST `tickets/{ticketId}`	Path:ticketId (String), Body: (x30.c0)	—	{ticketid}
POST `tickets`	Body: (x30.c0)	—	Tickets
POST `tickets/{ticketId}/read`	Path:ticketId (String), Body: (x30.c0)	—	Read

`io.intercom.android.sdk.api.ExternalUploadApi`

1 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST	Url: (String), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c), Part: (x30.y$c)	—	dynamic URL

`io.intercom.android.sdk.api.MessengerApi`

40 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `conversations/{conversationId}/quick_reply`	Path:conversationId (String), Body: (x30.c0)	—	Quick reply
POST `conversations/{conversationId}/remark`	Path:conversationId (String), Body: (x30.c0)	—	Remark
PUT `device_tokens`	Body: (x30.c0)	—	Device tokens
POST `content/fetch_carousel`	Body: (x30.c0)	—	Fetch carousel
POST `conversations/{conversationId}`	Path:conversationId (String), Body: (x30.c0)	—	{conversationid}
POST `conversations/inbox`	Body: (x30.c0)	—	Inbox
POST `gifs`	Body: (x30.c0)	—	Gifs
POST `home`	Body: (x30.c0)	—	Home
POST `articles/{articleId}`	Path:articleId (String), Body: (x30.c0)	—	{articleid}
POST `carousels/{carouselId}/fetch`	Path:carouselId (String), Body: (x30.c0)	—	Fetch
POST `sheets/open`	Body: (x30.c0)	—	Open
POST `content/fetch_survey`	Body: (x30.c0)	—	Fetch survey
POST `conversations/unread`	Body: (x30.c0)	—	Unread
POST `conversations/unread`	Body: (x30.c0)	—	Unread
POST `uploads`	Body: (x30.c0)	—	Uploads
POST `events`	Body: (x30.c0)	—	Events
POST `conversations/dismiss`	Body: (x30.c0)	—	Dismiss
POST `conversations/{conversationId}/read`	Path:conversationId (String), Body: (x30.c0)	—	Read
POST `conversations/{conversationId}/read`	Path:conversationId (String), Body: (x30.c0)	—	Read
POST `stats_system/carousel_button_action_tapped`	Body: (x30.c0)	—	Carousel button action tapped
POST `stats_system/carousel_completed`	Body: (x30.c0)	—	Carousel completed
POST `stats_system/carousel_dismissed`	Body: (x30.c0)	—	Carousel dismissed
POST `stats_system/carousel_screen_viewed`	Body: (x30.c0)	—	Carousel screen viewed
POST `stats_system/carousel_permission_granted`	Body: (x30.c0)	—	Carousel permission granted
POST `stats_system/push_opened`	Body: (x30.c0)	—	Push opened
POST `open`	Body: (x30.c0)	—	Open
POST `open`	Body: (x30.c0)	—	Open
POST `conversations/{conversationId}/rate`	Path:conversationId (String), Body: (x30.c0)	—	Rate
POST `conversations/{conversationId}/react`	Path:conversationId (String), Body: (x30.c0)	—	React
POST `articles/{articleId}/react`	Path:articleId (String), Body: (x30.c0)	—	React
POST `conversations/{conversationId}/record_interactions`	Path:conversationId (String), Body: (x30.c0)	—	Record interactions
POST `conversations/{conversationId}/reply`	Path:conversationId (String), Body: (x30.c0)	—	Reply

POST `error_reports`	Body: (x30.c0)	—	Error reports
POST `metrics`	Body: (x30.c0)	—	Metrics
POST `device_tokens`	Body: (x30.c0)	—	Device tokens
POST `conversations`	Body: (x30.c0)	—	Conversations
POST `conversations/{conversationId}/form`	Path:conversationId (String), Body: (x30.c0)	—	Form
POST `sheets/submit`	Body: (x30.c0)	—	Submit
POST `custom_bots/trigger_inbound_conversation`	Body: (x30.c0)	—	Trigger inbound conversation
POST `users`	Body: (x30.c0)	—	Users

`io.intercom.android.sdk.api.SurveyApi`

5 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `surveys/{surveyId}/dismiss`	Path:surveyId (String), Body: (x30.c0)	—	Dismiss
POST `surveys/{surveyId}/fetch`	Path:surveyId (String), Body: (x30.c0)	—	Fetch
POST `surveys/{survey_id}/failure`	Path:survey_id (String), Body: (x30.c0)	—	Failure
POST `surveys/{surveyId}/action_button_clicked`	Path:surveyId (String), Body: (x30.c0)	—	Action button clicked
POST `surveys/{surveyId}/submit`	Path:surveyId (String), Body: (x30.c0)	—	Submit

`com.bureau.devicefingerprint.p`

3 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST	Body: (com.bureau.devicefingerprint.models.EncryptedLocalSignals), Url: (String)	—	dynamic URL
POST	Body: (com.bureau.devicefingerprint.models.AnalyticsEvents), HeaderMap: (Map), Url: (String)	—	dynamic URL
POST `v1/deviceService/deviceData/android`	Body: (com.bureau.devicefingerprint.models.EncryptedDeviceData), HeaderMap: (Map)	—	Android

7 Real-time: GraphQL, WebSocket, XMPP

Channel	Details
Apollo GraphQL	`https://api.mrsool.co/graphql`; operation headers `X-APOLLO-*`.
ActionCable WebSocket	`wss://ws.mrsool.co/cable?user_id=&token=` — courier/order live updates.
XMPP	Smack-based chat against `xmpp.mrsool.co`; chat also has REST endpoints under `conversations/*`, `api/v1/chat*`.
Push	Firebase Cloud Messaging + Huawei Push Kit.

8 Third-party SDK inventory

Vendor	Role	Evidence
Firebase	FCM, Crashlytics 19.4.2, Analytics, Remote Config	`com.google.firebase`
Google Play Services	Maps, Location, Auth, FIDO	`com.google.android.gms`
Facebook	Login / Graph	`com.facebook`
Sentry	Crash / error reporting	`io.sentry`
Amplitude	Product analytics + session replay	`com.amplitude`
CleverTap	Engagement / push analytics	`com.clevertap`
Intercom 15.11.5	Support chat, help center, surveys	`io.intercom.android`
Branch	Deep links / attribution	`io.branch`
hCaptcha	Bot protection	`com.hcaptcha.sdk`
Bureau	Device fingerprint & fraud	`com.bureau`, `dia.bureau.id`
Paymob	Card payments	`com.paymob.acceptsdk`
OPPWA (HyperPay)	3-D Secure 2	`com.oppwa.mobile.connect`
Smack / XMPP	Chat transport	`org.jivesoftware.smack`
Lottie 6.x	Animations	`com.airbnb.lottie`
Huawei HMS	Push/Maps/Location 6.x	`com.huawei.hms`
OkHttp / Retrofit / Room / Glide	Core infra	package scan

9 Native libraries & crypto

Library	Size	Role	JNI / notable strings
`libvalues.so`	17 KB	Secret provider	19 × `Java_com_mrsool_utils_Secrets_get*` (Amplitude, Intercom, Bureau, Places, FeatureHub, BookMe, Butler, Captcha)
`libsecure_keys.so`	6 KB	Key wrapping	`SecureJNI.getKey/getKey2/getPKP1c..3c`
`libucs-credential.so`	289 KB	Credential crypto (mbedTLS)	`nativeDecryptKek`, `nativeDecryptKekWithEc`, `updateRootKey`; HKDF, AES-GCM/ECB/CBC, DES/3DES, RSA, ECDH, HMAC-SHA256/384/512
`libbureau-b1h1.so`	5 KB	Root detection	`VerifyRootNative.checkForRoot`
`libndkdatacollector.so`	7 KB	Anti-tamper / device fp	`NDKMappers.checkFrida`, `getApplicationId`, `getSourceDir`, `isPathReallyExist`
`libgmm-jni.so`	6 MB	Google Maps SDK native	32 `nativeInitClass` exports
`libsentry*.so`	—	Sentry crash reporting	—

Secret derivation (decompiled)

```
void Java_com_mrsool_utils_Secrets_getProductionApiKey(JNIEnv *env, jclass, jstring s) {
    const char *p = GetStringUTFChars(env, s, 0);
    char hex[65]; sha256(p, hex);
    for (i = 0; i < 32; i++)
        out[i] = hex[i % strlen(hex)] ^ embedded_table[i];
    return NewStringUTF(env, out);
}
```

> Keys are **not** plaintext: they are `SHA256(passphrase) XOR static table`. Since both inputs live in the app, every "protected" key is recoverable at runtime with Frida/instrumentation. This is obfuscation, not cryptographic protection.

Integrity checks

Root detection (`checkForRoot`) and Frida/hook detection (`checkFrida`, `isPathReallyExist`) are native, string/`/proc`-based and bypassable with standard Frida scripts.

10 Secrets & key handling

Secret	Value / source	Location
Firebase/Google API key	`AIzaSyDsd5yyknO4yxw6ImjT3EA4prXcGxuDqeE`	`res/values/strings.xml`
Google web client ID	`696665022433-cel5sfl76drpsha33pqOauppbvvt6d9n.apps.googleusercontent.com`	`strings.xml`
Firebase sender / project	696665022433 · `mrsool-c4a20`	`strings.xml`
Firebase DB URL	`https://mrsool-c4a20.firebaseio.com`	`strings.xml`
Facebook app id	`1087916497966372`	`fb_login_protocol_scheme`
Crashlytics mapping id	`7c21be0b463348fca120e80545e1825e`	`strings.xml`
Amplitude keys	via `Secrets.getAmplitude*Key`	libvalues.so (XOR)
Intercom keys	via `Secrets.getIntercom*Key`	libvalues.so (XOR)
Bureau credential id	via `Secrets.getBureau*CredentialId`	libvalues.so (XOR)
Google Places key	via `Secrets.getPlacesApi*Key`	libvalues.so (XOR)
FeatureHub keys	via `Secrets.getFeatureHubAPI*Key`	libvalues.so (XOR)

> **Assessment:** client-side secrets should be treated as public. Restrict Google keys by package + SHA-1; scope Bureau/Intercom/Amplitude keys server-side; never rely on native obfuscation.

11 TLS / cleartext audit

```
<network-security-config>
  <debug-overrides><trust-anchors>
    <certificates src="user"/><certificates src="system"/>
  </trust-anchors></debug-overrides>
  <base-config cleartextTrafficPermitted="true">
    <trust-anchors>
      <certificates src="@raw/mrsool_ca"/>
      <certificates src="@raw/mrsool_root_ca"/>
      <certificates src="user"/>
      <certificates src="system"/>
    </trust-anchors>
  </base-config>
</network-security-config>
```

Property	Result
Cleartext default	**Enabled for all domains**
Trusts user-installed CAs	**Yes — in base-config (production)**
Bundled CA #1	**Charles Proxy CA** — `CN=Charles Proxy CA (28 Mar 2020, Suaads-MacBook-Pro.local)`, O=XK72 Ltd, 2000-01-01 → 2049-05-24, SHA-256 `1E99BF36…4671`
Bundled CA #2	Own root `O=Mrsool, CN=Mrsool.co`, self-signed, 2023-04-09 → **2025-07-12 (expired)**
Other bundled CAs	`comodo_ca.crt`, `sectigo_ca.crt` (not referenced by NSC)
Certificate pinning	**None** (only OkHttp library class; no pins)

> **Impact:** an attacker on the network path, or anyone who can install a CA profile, can decrypt and modify all app traffic, steal bearer tokens, session cookies, chat messages and PII.

12 Security findings

Severity	Finding	Impact / remediation
Critical	User-CA trust in production base-config	Full TLS interception. Remove <code>src="user"</code>; use system trust + pinning.
Critical	Cleartext traffic permitted for all domains	Downgrade/MITM. Set <code>cleartextTrafficPermitted=false</code>; remove manifest flag.
Critical	Charles Proxy CA bundled and trusted	Debug proxy CA in release. Remove <code>res/raw/mrsool_ca.pem</code> and reference.
High	No certificate pinning	Add SPKI pinning for api/ws/xmpp hosts.
High	Obfuscation-only secret storage	Keys recoverable via instrumentation. Scope/rotate keys; server-side secrets.
Medium	Broad exported surface + deep links	Validate all intent extras; protect sensitive activities with permissions.
Medium	Expired own root CA trusted	Remove expired anchor.
Medium	Root/Frida detection bypassable	Do not rely on it for security decisions.
Info	allowBackup=false	Good.

13 Reconstruction blueprint (agent-ready)

13.1 Recommended stack

- **Language/UI:** Kotlin, Jetpack Compose + Material 3; Navigation Compose.
- **Architecture:** MVVM, feature modules (auth, home, order, chat, payment, me, butler).
- **Networking:** Retrofit + OkHttp (REST v6), Apollo Kotlin (GraphQL), OkHttp WebSocket (ActionCable), Smack (XMPP chat).
- **Local:** Room, DataStore, WorkManager.
- **Maps/location:** Google Maps + FusedLocation; Huawei Map Kit fallback.
- **Media:** Coil/Glide, Lottie, ExoPlayer/Media3.
- **Push:** FCM + Huawei Push Kit.
- **Payments:** Paymob Accept SDK + OPPWA 3-DS2.
- **Analytics/observability:** Firebase, Sentry, Amplitude, CleverTap, Intercom.
- **Fraud:** Bureau device intelligence.

13.2 Module structure

```
app/
  ├── core/ network, auth, session, di, ui-kit, analytics
  ├── feature-auth/        phone/OTP, Nafath, Absher, Facebook, face verification
  ├── feature-home/        feed, services, stores, search (Algolia + REST v6)
  ├── feature-order/       create order, cart, checkout, reorder, order details
  ├── feature-chat/        XMPP + REST conversations, butler AI, media, bills
  ├── feature-payment/     cards, Paymob, OPPWA 3-DS2, wallet, subscriptions
  ├── feature-courier/     courier mode, assignments, shift management, heatmap
  ├── feature-me/          profile, addresses, settings, delete account
  ├── feature-support/     Intercom help center, tickets, surveys
  ├── feature-stickers/    WhatsApp-style sticker packs (content provider)
  └── feature-grocery/     grocery catalog / search / cart
```

13.3 Core flows to implement

1. **Auth:** phone → OTP (`auth/signin` / `users/{{userid}}/verify_code`), Nafath/Absher for Saudi IDs, Facebook login, face verification WebView.
2. **Home/search:** REST v6 + Algolia indexes; carousels/surveys via `content/*`.
3. **Order:** store/menu → cart → `business_orders/submit` / `validate` → payment → live tracking via WebSocket.
4. **Chat:** XMPP connect to `xmpp.mrsool.co`; REST fallback (`conversations/*`, `api/v1/chat*`).
5. **Payment:** `payins/payin_options` → `payins/payin_transactions` → 3-DS via OPPWA/Paymob → poll `check_status`.
6. **Courier mode:** accept/assign, live location (`location/*`), shift schedule, order state transitions (`orders/{{order_id}}/update_order_state`).
7. **Subscriptions:** "Mrsool Black" options, manage, cancel.

13.4 Backend contract checklist

Implement the REST endpoints in §6.3 (121 app endpoints across `tq.d`, `tq.a`, `tq.g`, `tq.f`, `tq.e`, `hp.a`), the GraphQL endpoint, the ActionCable WebSocket and XMPP. All requests carry `Authorization: Bearer` and `device_id`; GraphQL requests carry Apollo operation headers.

```

V2-0UI & resource inventory overview

This volume documents everything needed to reproduce the **user interface, copy and local data layer** of Mrsool: design tokens, every layout, every string, menus, navigation, fonts, drawables, manifest specifics, preferences and assets. Class names, API contracts and backend behaviour are in Volume I.

Layout files	**896** across 9 configuration folders
Colors	**1256**
Dimensions	**1139**
Strings	**3064** (default locale) · plurals 54 · string-arrays 11
Styles / themes	**1510** defined · 227 referenced by layouts
Drawables	**2593** unique (animated-vector: 27, animation-list: 6, bitmap: 1084, inset: 1, layer-list: 20, ripple: 11, selector: 111, shape: 440, transition: 6, vector: 765, xml: 122)
Fonts	11 font resources
Menus	6 · navigation graphs 0
Animations	88 anim XML · raw resources 78
Assets	46 entries
Screen → layout mappings	**217** classes resolved
Local persistence	DataStore classes 2 · SharedPreferences holders 23 · Room databases 0

How to use this volume. Layout trees show the exact view hierarchy, ids, literal texts, sizes and orientations. Design values (colors/dimens/styles) are given in full, so a rebuilt layout will look identical. Exact attribute-level XML and binary assets are additionally shipped in the companion archive `resources/mrsool_res.zip` (see §V2-9).

No @Composable functions and no Room databases were found in the app code: the UI is classic Android Views + XML layouts (Material Components / AppCompat), and persistence uses DataStore/SharedPreferences plus the network cache. Any library-bundled Compose runtime is unused by app screens.

V2-1Design system — colors, dimensions, typography & styles

Every named color and dimension is listed below; values are exactly what the app resolves at runtime. The style table covers every style referenced by a layout, its parent chain, and all `Theme.*` styles, with the attributes that drive appearance.

1.1 Colors (1256)

Name	Value

V2-2Screen → layout mapping

Resolved by following screen classes to their ViewBinding/lambda providers and resource ids. A screen may legitimately own more than one layout (content + bottom sheet + error view).

Screen class	Kind	Layout(s)

> For these, the layout is inherited from a base class or the screen is a pure container. Use the layout catalogue (§V2-3) and the base-class revealed by the class list in Volume I.

V2-3Layout catalogue (896 layouts)

Complete hierarchy for every layout. Indentation = view nesting; parentheses show id, literal text/hint, size and orientation. Prefix groups follow the app's naming convention.

3.1 activity layouts (70)

> Full component table (exported flags, permissions, actions, authorities) is in Volume I §3. Full decoded manifest: `mrsool_dec/AndroidManifest.xml` .

V2-7Local persistence & preferences

7.1 DataStore (0 app classes)

No app-owned DataStore classes detected (library usage only).

7.2 SharedPreferences keys (0 app classes)

—

> **Schema note:** no Room/Realm/SQLCipher/GreenDAO database classes exist in this app (checked in smali). Persistence is DataStore/SharedPreferences + OkHttp/HTTP cache + in-memory models. Reproduce the same: create the listed keys with the same semantics, and cache API JSON responses.

V2-8UI reconstruction blueprint

8.1 Screen assembly order

1. Create the design system from §V2-1 (colors → `colors.xml`/theme, dimens, text styles).
2. For every screen in §V2-2, create the listed layout(s) from §V2-3 using the same view classes, ids, orientation and sizes. Bind with ViewBinding exactly as the original does.
3. Fill every label from §V2-4. Use the same keys so localisation files can be dropped in.
4. Wire menus (§V2-5) and navigation (§V2-5/§V2-2) with the same ids.
5. Apply manifest flags from §V2-6 (theme, cleartext, backup, queries, deep links).
6. Implement the data layer from §V2-7 and connect to the API contract in Volume I §6.

8.2 Fidelity checklist

Area	Source in this report
Palette / dark mode	§V2-1 colors (plus `values-night` in archive)
Spacing / radii / text sizes	§V2-1 dimens
Typography & component styling	§V2-1 styles
Exact screen structure	§V2-3 layout catalogue
Icons & illustrations	§V2-5 drawables + archive
Copy	§V2-4 strings / plurals / arrays
Navigation	§V2-2, §V2-5
Behavioural data	§V2-7 + Volume I models/API

8.3 What still comes from the archive / APK

Binary images, vector path data, nine-patch chunks, font binaries, localised `values-*`, and exact XML attributes are shipped in the companion archive. This is deliberate: reproducing them textually in a PDF would be lossy and enormous.

V2-9Companion resource archive

Exact, loss-free UI inputs are packaged next to this report:

```
resources/mrsool_res.zip
  ├── res/layout*/              all layout XML (every configuration)
  ├── res/drawable*/            vectors, shapes, selectors, bitmaps, nine-patch
  ├── res/values*/              colors, dimens, styles, strings, arrays, plurals (all locales)
  ├── res/menu/ res/navigation/ res/anim/ res/animator/ res/font/ res/raw/
  ├── res/mipmap*/              launcher icons
  ├── AndroidManifest.xml       decoded manifest
  └── assets/                   bundled assets
```

Generated with `apktool d -r` from the APK whose SHA-256 is recorded on the cover. Import it directly into an Android project; then apply the API/data contracts from Volume I.
