23. V2-9 Resource archive

0 Executive summary

> **Overall risk: HIGH.** The release build embeds working backend credentials and SOAP passkeys in plaintext, and allows cleartext HTTP for the primary API host. Any party who downloads the APK can extract these values and call/abuse the shipment and tracking backend.

SMSA Mobile is a logistics app (shipment creation, tracking, address book, payments) built as a single-module Java/Kotlin Android app. The network layer is a hybrid of **legacy SOAP/XML** (`MobileAppService.asmx`, `Waybill1Service.svc`) and a newer **REST** API (`api/v1/...`). Payments use **PayFort** and **STC Pay**.

Key findings

- **Critical — hardcoded backend credentials** in SOAP request templates: username `smsaMobile`, password `$M$@MObile`, account `RU9997`, tracking password `gf343s$a`, plus ~15 service `passkey` values.
- **High — cleartext HTTP permitted** for `mobileapi.smsaexpress.com`, `track.smsaexpress.com`, `strack.cloudapp.net`.
- **Medium — 11 app activities explicitly exported** without permission (Login, CreateShipment, ...).
- **Medium — a public leaf certificate is bundled as a trust anchor.**
- No certificate pinning; no native libraries.

1 App identity & build

Field	Value
Package name	`com.smsagrp.smsa.main`
Version name / code	2.7 / 114
minSdk / targetSdk	27 / 36
Classes / resources	9616 / 1711
DEX files	2 (classes.dex, classes2.dex)
Native libraries	None
App class	`com.smsagrp.smsa.main.SmsaExpressApplication`
APK SHA-256	`1dab937421845b4b5ca2f9713fd181cb7fc31029ac8ca0841c6a3edeb396c27d`
APK size	21,664,385 bytes

Certificate SHA-256	`3d68c218fa0a0056d45e8f418470f680d9beb09bcc89e1ef59c09e3544638da6`
Validity	2014-11-27T07:52:21.000Z → 2039-11-21T07:52:21.000Z
Key algorithm / serial	rsa / 7D4230C3
Application flags	allowBackup=false · extractNativeLibs=false · networkSecurityConfig present

2 Permissions

36 declared permissions.

Permission	Purpose / note
`android.permission.INTERNET`	Network access
`android.permission.ACCESS_NETWORK_STATE`	Connectivity checks
`android.permission.ACCESS_FINE_LOCATION`	Precise location (address/map)
`android.permission.ACCESS_COARSE_LOCATION`	Approximate location
`android.permission.CAMERA`	Address scan / shipment photos
`android.permission.CALL_PHONE`	Call support/driver from app
`android.permission.POST_NOTIFICATIONS`	Push notifications
`android.permission.WRITE_EXTERNAL_STORAGE`	Legacy file storage (targetSdk 36 — largely superseded)
`com.smsagrp.smsa.main.permission.C2D_MESSAGE`	
`android.permission.WAKE_LOCK`	Background work
`com.google.android.c2dm.permission.RECEIVE`	
`android.permission.VIBRATE`	
`android.permission.RECEIVE_BOOT_COMPLETED`	
`com.sec.android.provider.badge.permission.READ`

`schemas.microsoft.com`	1
`checkout.payfort.com`	1
`maps.google.com`	1

6.2 Authentication model

SOAP calls carry service-level `passkey` XML elements and (for pickup) a fixed `username` / `password` / `accountNumber`. REST calls use a session/token returned by `api/Users/CheckUserLogin`; loyalty calls pass an `L-API-KEY` header.

6.3 Complete Retrofit / service contract

Extracted from smali annotations. "Parameters" lists Path/Query/Header/Body/Field roles.

`com.smsagrp.smsa.main.data.network.STCApiService`

3 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `Merchant/v3/PaymentInquiry`	Header:X-ClientCode (String), Header:X-UserName (String), Header:X-Password (String), Body: (com.smsagrp.smsa.main.data.model.StcPayInqueryReq)	Content-Type: application/json Accept: application/json	Paymentinquiry
POST `Merchant/v3/MobilePaymentAuthorize`	Header:X-ClientCode (String), Header:X-UserName (String), Header:X-Password (String), Body: (com.smsagrp.smsa.main.data.model.StcPayReq)	Content-Type: application/json Accept: application/json	Mobilepaymentauthorize
POST `Merchant/v3/RefundPayment`	Header:X-ClientCode (String), Header:X-UserName (String), Header:X-Password (String), Body: (com.google.gson.n)	Content-Type: application/json Accept: application/json	Refundpayment

`com.smsagrp.smsa.main.data.network.APIService`

21 endpoint(s)

Method / Path	Parameters	Static headers	Inferred purpose
POST `MobileAppService.asmx`	Body: (okhttp3.RequestBody)	—	Mobileappservice.asmx
POST `https://mobileapi.smsaexpress.com/SmsaMobileWebService/MobileAppService.asmx`	Body: (okhttp3.RequestBody)	SOAPAction:https://mobileapi.smsaexpress.com/SmsaMobileWebService/viewversion	Mobileappservice.asmx

7 Third-party SDKs & payment gateways

Vendor	Role	Evidence
PayFort (Amazon Payment Services)	Card payment / 3-D Secure	`com.payfort.fortpaymentsdk` 2.2.3, `/FortAPI/sdk/*`
STC Pay	Wallet payment	`STCApiService`: `Merchant/v3/PaymentInquiry`, `MobilePaymentAuthorize`, `RefundPayment`
Firebase	FCM, Crashlytics, Analytics, Remote Config	`firebase`, `gcm_defaultSenderId`
Google Play Services	Maps, Location, Auth	`com.google.android.gms`
Huawei HMS	Push / maps / location (Huawei devices)	`com.huawei.hms` 6.x
OneSignal	Push notifications	`com.onesignal`
OkHttp / Retrofit	HTTP stack	`okhttp3`, `retrofit2`
Glide / Room / Dexter	Images / local DB / permissions	package scan

8 Secrets & hardcoded credentials

> **Critical.** These are shipped as string constants and are recoverable with `apktool` / `strings` in seconds. Rotate all of them and move to per-user tokens.

Secret	Value	Where
SOAP pickup username	`smsaMobile`	`Pickupservice` envelope
SOAP pickup password	`$M$@MObile`	`Pickupservice` envelope
SOAP pickup account	`RU9997`	`Pickupservice` envelope
Tracking username	`smsamobile`	`GetShipmentsByPhone`
Tracking password	`gf343s$a`	`GetShipmentsByPhone`
Address update passkey	`au$ervice`	`AddressUpdate`
Application feedback passkey	`Afb$ervice`	`ApplicationFeedBack`
List centers passkey	`rc$ervice`	`ListOfCenters`
View pickup passkey	`vPup$ervice`	`ViewPickup`
Rate inquiry passkeys	`ri$ervice` / `rid$ervice`	`RateInquiry`
View shipment passkey	`vs$ervice`	`viewshipment`
Generate AWB passkey	`gAWB$ervice`	`GenerateAWB`
View validation passkey	`Vav$ervice`	`ViewValidation`
Verify SMS passkey	`vfCode$ervice`	`VerifySmscode`
View version passkey	`vVer$ervice`	`viewversion`
Search-by-mobile passkey	`SMSA@x6iNa`	`SearchbyMobile`, `getTracking`
Firebase/Google API key	`AIzaSyA_Xx3ggwAyQOEwYmFS2QeRouiy8hZvsuA`	`res/values/strings.xml`
Google web client ID	`134917681206-fmruv6ked48dfs5ra0mte65g2neb1opr.apps.googleusercontent.com`	`strings.xml`
Firebase project	`smsa-express` (sender 134917681206)	`strings.xml`
Crashlytics mapping id	`853b17ffa3cb4868a24787d811765d98`	`strings.xml`

9 TLS / cleartext audit

```
<network-security-config>
  <base-config cleartextTrafficPermitted="false">
    <trust-anchors>
      <certificates src="system" />
      <certificates src="@raw/usertrust_root" />
    </trust-anchors>
  </base-config>
  <domain-config cleartextTrafficPermitted="true">
    <domain includeSubdomains="false">track.smsaexpress.com</domain>
    <domain includeSubdomains="false">mobileapi.smsaexpress.com</domain>
    <domain includeSubdomains="true">strack.cloudapp.net</domain>
  </domain-config>
  <domain-config cleartextTrafficPermitted="false">
    <domain includeSubdomains="true">smsaexpress.com</domain>
  </domain-config>
</network-security-config>
```

Property	Result
Cleartext default	Disabled (good)
Cleartext for API host	**Enabled** — `mobileapi.smsaexpress.com`
Trusts user CAs	No (good)
Bundled CA	`res/raw/usertrust_root.crt` — leaf cert `*.smsaexpress.com` (Network Solutions RSA OV SSL CA 4), valid 2025-10-20 → 2026-11-20, SHA-256 `55E0926F…9D1C`
Certificate pinning	None

> **Note:** bundling a public leaf certificate as a trust anchor is not pinning and adds no confidentiality; it only couples the app to that certificate's expiry.

10 Security findings

Severity	Finding	Impact / remediation
Critical	Backend credentials & SOAP passkeys hardcoded	Anyone can extract and call the shipment/tracking backend. Rotate credentials, use per-user auth, remove from client.
High	Cleartext HTTP allowed for primary API and tracking hosts	Session tokens / PII exposed to on-path attackers. Enforce HTTPS-only.
Medium	Exported activities without permission	Any app can launch Login/CreateShipment/ShipmentPickUp etc. Set exported=false or protect with signature permission.
Medium	Leaf certificate bundled as trust anchor	Weak trust design; replace with proper pinning (or none) and system trust.
Medium	No certificate pinning	MitM feasible if a CA is trusted. Add pinning for api hosts.
Low	Google/Firebase API keys in resources	Restrict keys by package + SHA-1 in Google Cloud console.
Info	allowBackup=false	Good.
Info	No deep links	Reduces external entry points.

11 Reconstruction blueprint (agent-ready)

11.1 Recommended stack

- **Language/UI:** Kotlin, Jetpack (Navigation, ViewModel, LiveData/Flow), Material 3.
- **Networking:** REST via Retrofit + OkHttp (JSON); legacy SOAP via OkHttp + XML serializer (or migrate backend to REST). Gson/Moshi for models.
- **Local data:** Room for addresses, shipments cache, session; DataStore for prefs.
- **Maps/location:** Google Maps SDK + FusedLocationProvider.
- **Push:** Firebase Cloud Messaging (+ Huawei Push Kit for HMS devices).
- **Payments:** PayFort SDK + STC Pay merchant API.
- **Images:** Glide/Coil.

11.2 Module structure

```
app/
  ├── data/
  │    ├── network/  ApiService (REST), SoapClient (ASMX/SVC), StcPayService
  │    ├── model/    request/response DTOs (see Appendix A)
  │    ├── repo/     AuthRepo, ShipmentRepo, TrackingRepo, PaymentRepo
  │    └── local/    Room entities + DAOs
  ├── ui/
  │    ├── onboarding/ (Language, Intro, Login, Register, ForgotPassword, CreatePassword)
  │    ├── home/       (shipments dashboard, notifications)
  │    ├── create/     (CreateShipment, addresses, currency, review)
  │    ├── shipments/  (ShipmentDetails, Pickup, ShipmentCreated)
  │    ├── address/    (list, add/edit, map selection, validation)
  │    ├── payments/   (SavedCards, StcPay, PayFort 3DS)
  │    └── account/    (Biometric, LoyaltyCard, About, Contact)
  └── util/ (session, validators, location, permission helper)
```

11.3 Core user flows to implement

1. **Onboarding:** language → intro → login/registration → OTP/passcode → home.
2. **Login:** `POST api/Users/IsExistingUser` then `POST api/Users/CheckUserLogin`; persist token.
3. **Create shipment:** pick sender/receiver address (map + validation), weight/currency, rate inquiry (SOAP `RateInquiry`), confirm → `GenerateAWB` → ShipmentCreated.
4. **Track:** by AWB or mobile via SOAP `getTracking` / `GetShipmentsByPhone`.
5. **Pay:** PayFort card/3DS or STC Pay `PaymentInquiry` → `MobilePaymentAuthorize`.
6. **Account:** saved addresses, saved cards, biometric lock, loyalty points.

11.4 Backend contract checklist

Implement the REST paths in §6.3 and the SOAP operations listed under `APIService` (`MobileAppService.asmx`) and `WaybillService.svc`. Every SOAP envelope needs the service `passkey`; treat these as server-side secrets, not client constants.

12 Appendices

Appendix A — Data models (683)

Class	Fields
`retrofit2.Response`	body:Object, errorBody:okhttp3.ResponseBody, rawResponse:okhttp3.Response
`okhttp3.Response$Builder`	body:okhttp3.ResponseBody, cacheResponse:okhttp3.Response, code:I, exchange:okhttp3.internal.connection.Exchange, handshake:okhttp3.Handshake, headers:okhttp3.Headers$Builder, message:String, networkResponse:okhttp3.Response, priorResponse:okhttp3.Response, protocol:okhttp3.Protocol, receivedResponseAtMillis:J, request:okhttp3.Request, sentRequestAtMillis:J

```

V2-0UI & resource inventory overview

This volume documents everything needed to reproduce the **user interface, copy and local data layer** of SMSA Mobile: design tokens, every layout, every string, menus, navigation, fonts, drawables, manifest specifics, preferences and assets. Class names, API contracts and backend behaviour are in Volume I.

Layout files	**309** across 4 configuration folders
Colors	**569**
Dimensions	**1651**
Strings	**1053** (default locale) · plurals 3 · string-arrays 5
Styles / themes	**1229** defined · 102 referenced by layouts
Drawables	**726** unique (animated-vector: 22, bitmap: 83, layer-list: 10, ripple: 7, selector: 26, shape: 154, transition: 6, vector: 317, xml: 101)
Fonts	11 font resources
Menus	1 · navigation graphs 1
Animations	50 anim XML · raw resources 7
Assets	13 entries
Screen → layout mappings	**67** classes resolved
Local persistence	DataStore classes 1 · SharedPreferences holders 10 · Room databases 0

How to use this volume. Layout trees show the exact view hierarchy, ids, literal texts, sizes and orientations. Design values (colors/dimens/styles) are given in full, so a rebuilt layout will look identical. Exact attribute-level XML and binary assets are additionally shipped in the companion archive `resources/smsa_mobile_res.zip` (see §V2-9).

No @Composable functions and no Room databases were found in the app code: the UI is classic Android Views + XML layouts (Material Components / AppCompat), and persistence uses DataStore/SharedPreferences plus the network cache. Any library-bundled Compose runtime is unused by app screens.

V2-1Design system — colors, dimensions, typography & styles

Every named color and dimension is listed below; values are exactly what the app resolves at runtime. The style table covers every style referenced by a layout, its parent chain, and all `Theme.*` styles, with the attributes that drive appearance.

1.1 Colors (569)

V2-2Screen → layout mapping

Resolved by following screen classes to their ViewBinding/lambda providers and resource ids. A screen may legitimately own more than one layout (content + bottom sheet + error view).

Activities without a resolved layout (12)

com.google.android.gms.common.api.GoogleApiActivity · com.huawei.hms.activity.BridgeActivity · com.huawei.hms.activity.EnableServiceActivity · com.huawei.hms.location.entity.activity.DetectedActivity · com.huawei.secure.android.common.activity.SafeActivity · com.huawei.secure.android.common.activity.SafeAppCompatActivity · com.huawei.secure.android.common.activity.SafeFragmentActivity · com.huawei.secure.android.common.activity.SafePreferenceActivity · com.karumi.dexter.DexterActivity · com.onesignal.core.activities.PermissionsActivity · com.onesignal.notifications.activities.NotificationOpenedActivity · com.payfort.fortpaymentsdk.presentation.base.FortActivity

> For these, the layout is inherited from a base class or the screen is a pure container. Use the layout catalogue (§V2-3) and the base-class revealed by the class list in Volume I.

V2-3Layout catalogue (309 layouts)

Complete hierarchy for every layout. Indentation = view nesting; parentheses show id, literal text/hint, size and orientation. Prefix groups follow the app's naming convention.

3.1 activity layouts (51)

V2-4String resources (1053)

All default-locale copy. Use these verbatim for labels, buttons, dialogs, errors and empty states. Arabic and other locales are present in the APK (`values-*`); only the default locale is listed here.

4.1 Strings

Key	Value
`Android`	Android
`ArrayList_Existing`	ArrayList_Existing
`BIKE`	Bike
`Flat_No`	Flat No.
`Floor_No`	Floor
`Home`	Home
`Saudi_Arabia`	Saudi Arabia
`Search_city_space`	Search City
`abc_action_bar_home_description`	Navigate home
`abc_action_bar_up_description`	Navigate up
`abc_action_menu_overflow_description`	More options
`abc_action_mode_done`	Done
`abc_activity_chooser_view_see_all`	See all
`abc_activitychooserview_choose_application`	Choose an app
`abc_capital_off`	OFF
`abc_capital_on`	ON
`abc_menu_alt_shortcut_label`	Alt+
`abc_menu_ctrl_shortcut_label`	Ctrl+
`abc_menu_delete_shortcut_label`	delete
`abc_menu_enter_shortcut_label`	enter
`abc_menu_function_shortcut_label`	Function+
`abc_menu_meta_shortcut_label`	Meta+
`abc_menu_shift_shortcut_label`	Shift+
`abc_menu_space_shortcut_label`	space
`abc_menu_sym_shortcut_label`	Sym+
`abc_prepend_shortcut_label`	Menu+
`abc_search_hint`	Search…
`abc_searchview_description_clear`	Clear query
`abc_searchview_description_query`	Search query
`abc_searchview_description_search`	Search
`abc_searchview_description_submit`	Submit query
`abc_searchview_description_voice`	Voice search
`abc_shareactionprovider_share_with`	Share with
`abc_shareactionprovider_share_with_application`	Share with %s
`abc_toolbar_collapse_description`	Collapse
`about_us_desc`	"At SMSA, we redefine logistics by moving the world, one shipment at a time. With decades of expertise and a trusted footprint in Saudi Arabia and international markets, we connect busir
`abouts_us_one`	"Moving the World, One Shipment at a Time"
`aboutus`	About Us
`account`	Account
`action_cannot_be_undone`	The action cannot be undone once confirmed
`add`	+ Add
`add_a_card_for_faster_payments`	Add and save your card for faster payments
`add_address`	Add Address
`add_address_desc`	Add your address to schedule pickups and deliveries
`add_card`	Add Card
`add_card_desc`	You will be charged an amount of 1 SAR for card verification and it will be refunded directly to your card.
`add_card_without_plus`	Add Card
`add_edit_address`	You can add a new address or make changes in the existing addresses
`add_new_address`	Add a new address
`add_new_card`	Add New Card
`add_preffered_del_address`	Add an address to deliver your shipments
`add_r_edit_address`	Add/Edit Address
`add_sender_address`	Add Sender Address
`add_your_address`	Add Your Address
`address`	Address
`address_book`	Address Book
`address_code_validation`	Short Address Code must be of 8 characters
`address_details`	Address Details
`address_id`	Address Id
`address_label`	Additional Info
`address_line`	Address Line
`address_save_success`	Address Saved Successfully
`address_update_success`	Address Updated Successfully
`address_update_successful`	Address update successful
`address_validated_desc`	Your shipment address is confirmed.
`address_validated_successfully`	Address validated successfully

6.5 Declared deep-link schemes/hosts (0)

—

> Full component table (exported flags, permissions, actions, authorities) is in Volume I §3. Full decoded manifest: `smsa_mobile_dec/AndroidManifest.xml`.

V2-7Local persistence & preferences

7.1 DataStore (0 app classes)

No app-owned DataStore classes detected (library usage only).

7.2 SharedPreferences keys (1 app classes)

Class	Keys / files
`com.payfort.fortpaymentsdk.utils.Utils`	`ENVIRONMENT` `PREF_UNIQUE_ID`

> **Schema note:** no Room/Realm/SQLCipher/GreenDAO database classes exist in this app (checked in smali). Persistence is DataStore/SharedPreferences + OkHttp/HTTP cache + in-memory models. Reproduce the same: create the listed keys with the same semantics, and cache API JSON responses.

V2-8UI reconstruction blueprint

8.1 Screen assembly order

1. Create the design system from §V2-1 (colors → `colors.xml`/theme, dimens, text styles).
2. For every screen in §V2-2, create the listed layout(s) from §V2-3 using the same view classes, ids, orientation and sizes. Bind with ViewBinding exactly as the original does.
3. Fill every label from §V2-4. Use the same keys so localisation files can be dropped in.
4. Wire menus (§V2-5) and navigation (§V2-5/§V2-2) with the same ids.
5. Apply manifest flags from §V2-6 (theme, cleartext, backup, queries, deep links).
6. Implement the data layer from §V2-7 and connect to the API contract in Volume I §6.

8.2 Fidelity checklist

Area	Source in this report
Palette / dark mode	§V2-1 colors (plus `values-night` in archive)
Spacing / radii / text sizes	§V2-1 dimens
Typography & component styling	§V2-1 styles
Exact screen structure	§V2-3 layout catalogue
Icons & illustrations	§V2-5 drawables + archive
Copy	§V2-4 strings / plurals / arrays
Navigation	§V2-2, §V2-5
Behavioural data	§V2-7 + Volume I models/API

8.3 What still comes from the archive / APK

Binary images, vector path data, nine-patch chunks, font binaries, localised `values-*`, and exact XML attributes are shipped in the companion archive. This is deliberate: reproducing them textually in a PDF would be lossy and enormous.

V2-9Companion resource archive

Exact, loss-free UI inputs are packaged next to this report:

```
resources/smsa_mobile_res.zip
  ├── res/layout*/             all layout XML (every configuration)
  ├── res/drawable*/           vectors, shapes, selectors, bitmaps, nine-patch
